Preface **7**

I Where to start? **9**

1 A cultural start **13**
1.1 Cultural introduction 13
1.2 Euclid: point, line, and plane 15
1.3 Descartes: precalculus 22
1.4 Newton: general paths and areas 30
1.4.1 New problem(s): The geometry of functions 35
1.4.2 A new problem: curvature 42
1.4.3 Weierstrass: minimization of functionals 43
1.5 Two steps backward 44
1.6 Cayley: global linearity 44
1.7 Gauss: surfaces 44
1.8 Riemann: charts 44

2 Starting with a question **45**
2.1 What is differential geometry? 46
2.2 What is geometry? 46
2.3 What is calculus? 46
2.4 What is linear algebra? 46
2.5 What is tensor analysis? 46

3 Starting with examples **47**
3.1 Preliminary calculations 47
3.2 Finding the first example(s) 59

3.3 Changing coordinates and charts . . . 59
3.4 The Lesson of $\mathcal{B}$ . . . 60

4 Starting where you are **61**

5 A Gaussian start **67**
5.1 Stereographic projection . . . 67
5.2 Bistereographic projection . . . 69
5.3 Al Biruni projection . . . 71

6 Starting with tensors **73**

II Where to go **75**

7 Poincaré conjecture **79**
7.1 Topological surfaces . . . 79
7.2 Connected and simply connected spaces . . . 80
7.3 Topological manifolds of dimension three . . . 80
7.4 Existence of a differentiable structure . . . 80
7.5 Existence of a Riemannian structure . . . 80
7.6 Ricci flow . . . 80

8 Lawson's conjecture **81**

9 Willmore's Conjecture **83**

10 Wente's conjecture **85**

III Getting Ready **87**

11 Preliminary Calculus **89**
11.1 Euclidean space . . . 89
11.2 Cauchy-Schwarz inequality . . . 92
11.2.1 Notation . . . 94
11.3 Calculus . . . 95
11.3.1 Integration . . . 95
11.3.2 Differentiation . . . 101

11.3.3 Theorems 101

12 Introduction/Overview **103**

13 Spaces and spaces of functions **107**
13.1 Topological spaces 107
13.2 Distance spaces (a.k.a. metric spaces) 108
13.3 Normed spaces 108
13.4 Inner product spaces 108
13.5 Spaces of differentiable functions 108

14 Flat Spaces **109**

15 Riemannian spaces (extrinsic view) **111**

16 The Big Lie and the Lie groupies **113**
16.1 Groups 113
16.2 Matrix groups 117
16.3 The matrix ring $\mathbb{R}^{2\times 2}$ 120
16.4 $\mathbb{S}^1$ as a group 121
16.5 $SL_2(\mathbb{R})$ 122

17 Tensors of low order **123**

IV Getting There Part I
The First Three Calculations: Length, Angle, Area **125**

V Getting There Part II
The Second Calculations: Curvature **127**

VI Getting There Part III
Calculus on Manifolds **129**

VII Getting There Part IV

Riemannian Geometry **131**

18 Surfaces **133**
18.1 partitions of unity 133
18.2 Existence 133

VIII Applications **135**

IX Appendix **137**

A Lecture 1 Outline **139**
